

Priyanshu

Bengaluru — priyanshumaurya007@gmail.com — 7380607970 — LinkedIn

Summary

Backend Engineer specializing in high-performance systems in FinTech and Blockchain domains. Experienced in microservices, real-time trading systems, and multi-chain integrations. Proven impact with 15x latency improvement, 95% DB load reduction, and 60% infrastructure cost savings.

Experience

Software Engineer, KoinBX

May 2024 – Present

- Led backend development across web, iOS, and Android platforms, owning end-to-end delivery of high-scale trading systems.
- Designed microservice-based backend architecture for a crypto exchange serving 100K+ users.
- Built and optimized real-time trading systems (order matching, execution, WebSockets).
- Improved latency from 150ms → 10ms (15x faster) and increased throughput from 400 → 6000 trades/min.
- Reduced DB load by 95% and eliminated settlement queries (3 → 0 per trade).
- Reduced infrastructure cost by 60% (15L → 5L/month).
- Implemented Kafka-based event-driven architecture for high-throughput workflows.
- Built multi-chain blockchain integrations (EVM, Liminal, custom) handling deposits, withdrawals, and transaction lifecycle.
- Built fault-tolerant systems, RBAC admin backend, and real-time alerting.
- Owned critical trading and transaction systems end-to-end in production environments.
- Designed systems for high concurrency and real-time financial workflows at scale.
- Optimized P&L and balance calculations using pre-computed data models, significantly reducing API response time.
- Designed efficient data pipelines and caching strategies to handle real-time market data and order book updates.

Software Development Engineer, CAW Studios

June 2022 – April 2024

- Built scalable backend systems using NestJS and TypeORM.
- Designed modular APIs improving maintainability and scalability.
- Integrated Microsoft WOPI for secure document interaction.
- Developed AI bots using Haptik and managed Azure CI/CD.

Core Expertise

Distributed Systems — Real-Time Trading Systems — Blockchain Infrastructure — Microservices Architecture — High-Scale Backend Systems

Skills

Languages: TypeScript, JavaScript, C++, Python

Backend: NestJS, Node.js, Express.js

Systems: Microservices, Distributed Systems, WebSockets

Blockchain: EVM, Liminal, Custom Chains

Databases: MSSQL, PostgreSQL, MongoDB, Redis

Messaging: Kafka, Azure Event Hubs

Cloud: Azure, GCP, CI/CD, Docker

Concepts: System Design, Scalability, Fault Tolerance, Performance Optimization

Key Projects

- Crypto Exchange System: Built matching engine and real-time trading infrastructure for 100K+ users.
- Blockchain Infrastructure: Designed multi-chain system for deposits, withdrawals, and confirmations.
- Admin Backend: RBAC-based system with monitoring and real-time alerts.

Education

B.Tech CSE, Lovely Professional University

2019 – 2023

CGPA: 9.13

Achievements

GCP ACE (In Progress) — Azure Fundamentals — 5 HackerRank — 3 CodeChef
